Notelac™

CHECKPOINT CAPTURE

Mobile app UI — every runner, every checkpoint.

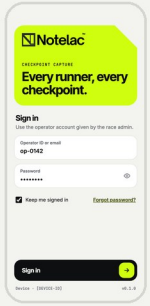

Light & dark mode · 14 screens · 10 Nov 2026

Android & iOS · built with Expo (React Native)

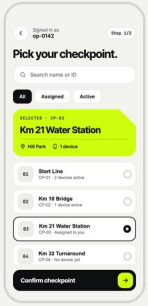

Screens

The operator flow: sign in → pick checkpoint → camera setup → capture → review and upload. Light mode shown; every screen also has a dark version, and the capture screen has a 16:9 landscape layout.

01

Login

Operator signs in with the account from the race admin. Test accounts sign in with one tap and can load sample data.

Light

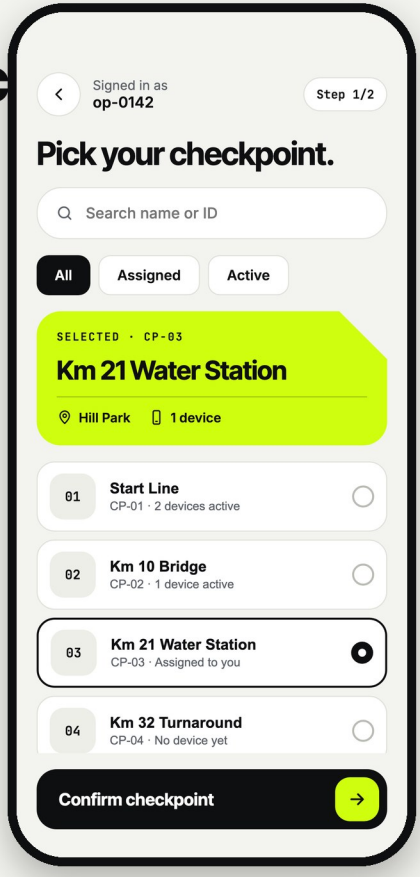

Dark

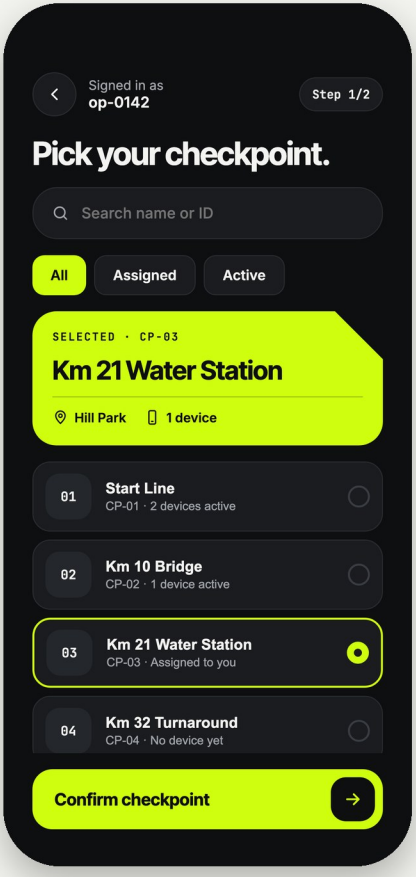

02

Checkpoint selec

Search and pick the checkpoint this phone covers. The lime card shows the selected checkpoint, place and devices.

Light

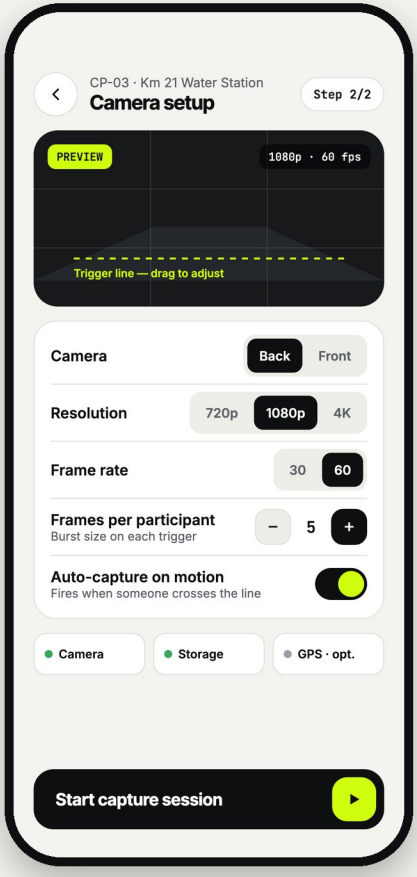

Dark

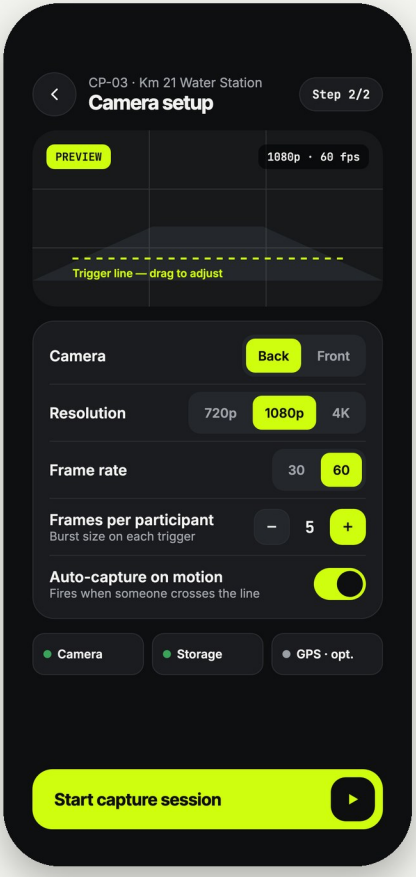

03

Camera settings

Live preview with the trigger line, lens, resolution, frame rate, frames per runner, auto-capture and permission status.

Light

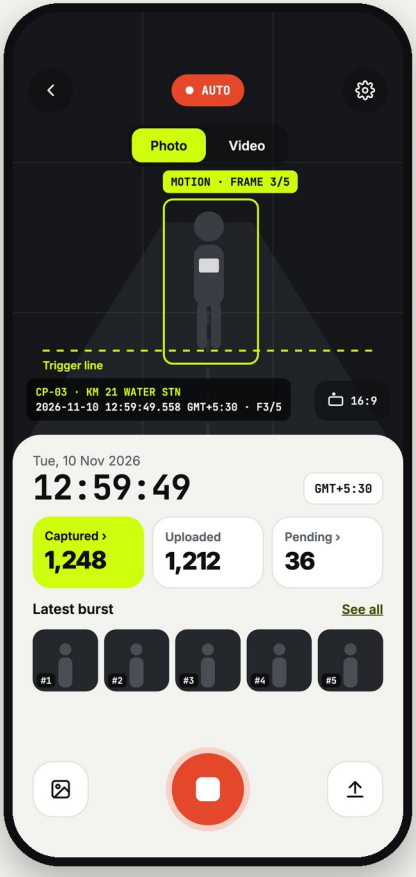

Dark

04

Live capture

Camera view with motion box, Photo / Video switch and a burned-in timestamp (checkpoint · date · time to the ms · zone). Big clock, live counts, latest burst, start / stop.

Light

Dark

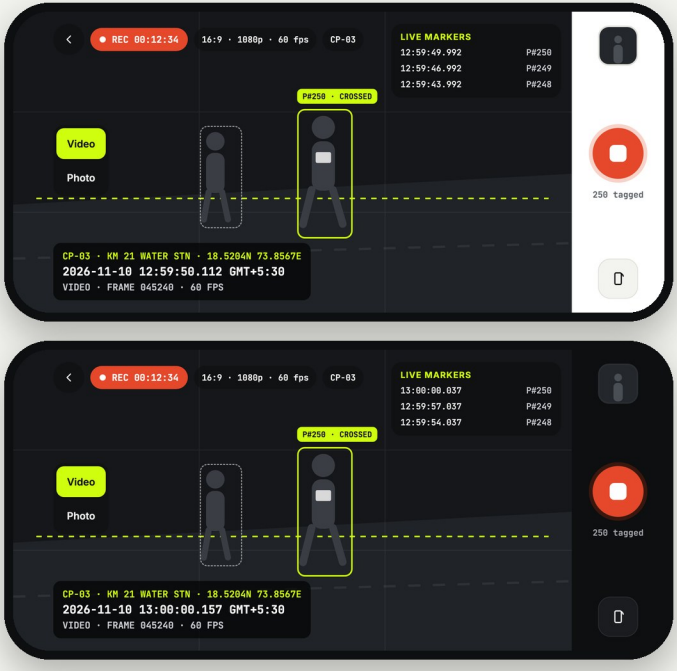

05

Landscape 16:9 video

Tilt the phone for 16:9 recording. REC timer, live runner markers with exact times, the timestamp overlay and the record button on the side rail.

Light →

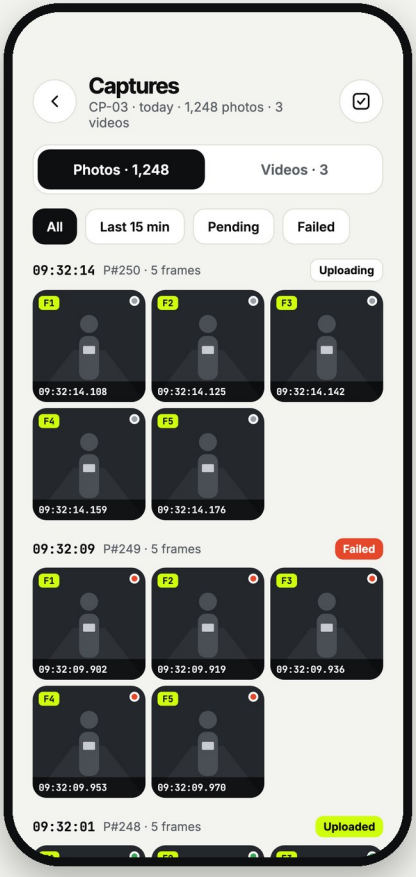

Dark →

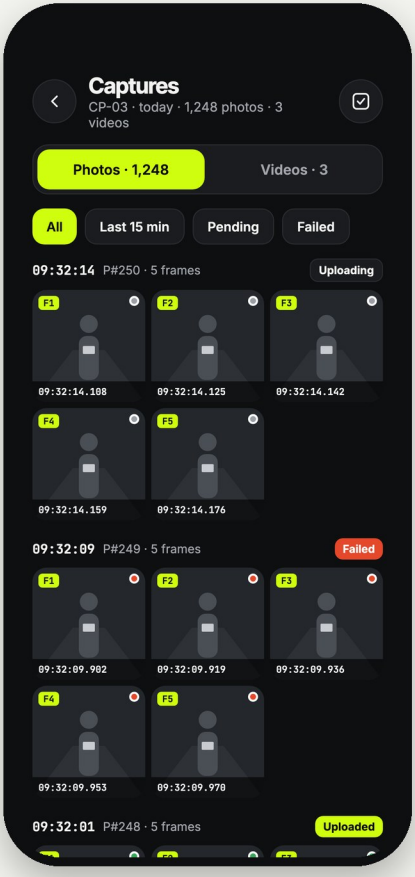

06

Gallery

Photos grouped by runner (5 frames per burst) with the timestamp on every frame and an upload-status dot. Videos tab shows clips with runner markers.

Light

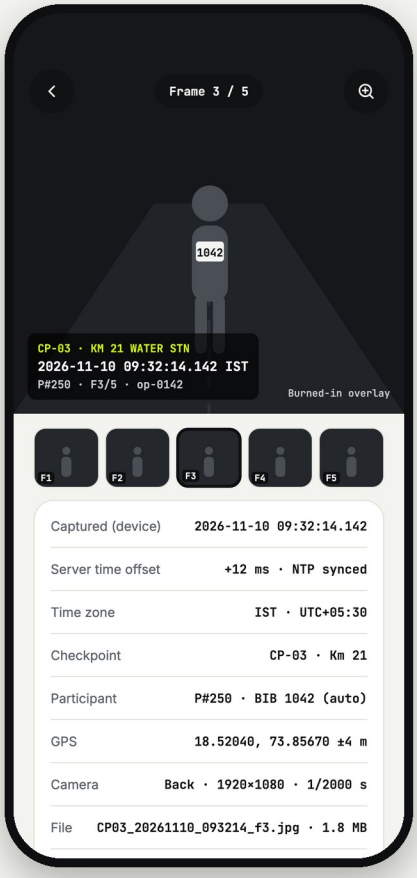

Dark

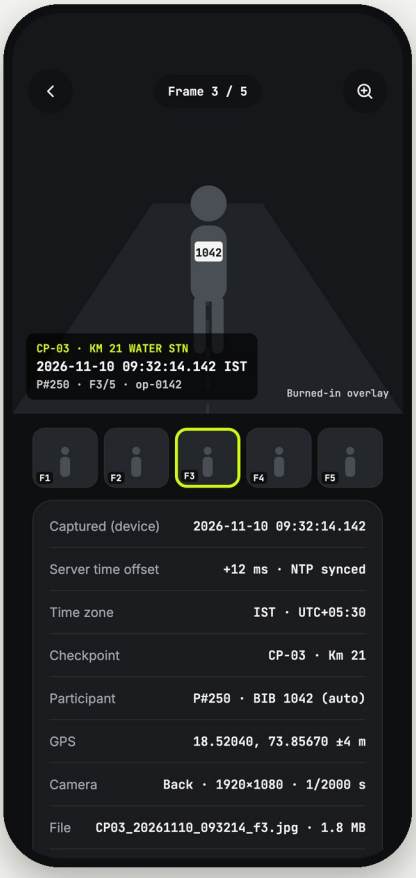

07

Image detail

Full frame with the burned-in overlay, burst strip, and all metadata: device and server time, zone, checkpoint, BIB, GPS, camera and file. Tag a BIB or re-upload.

Light

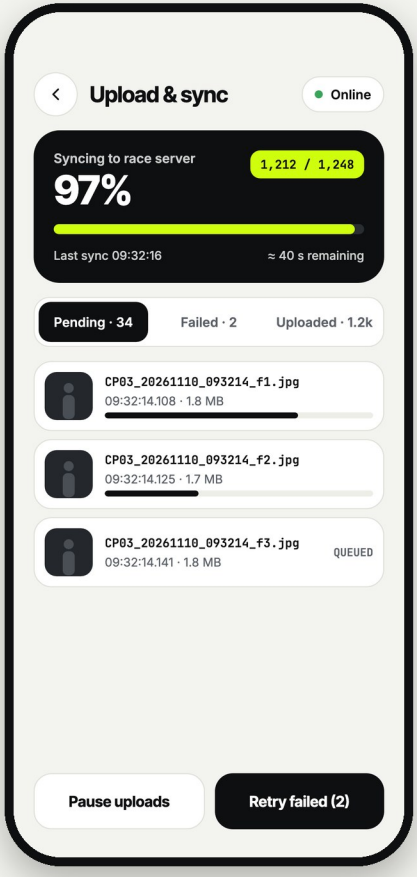

Dark

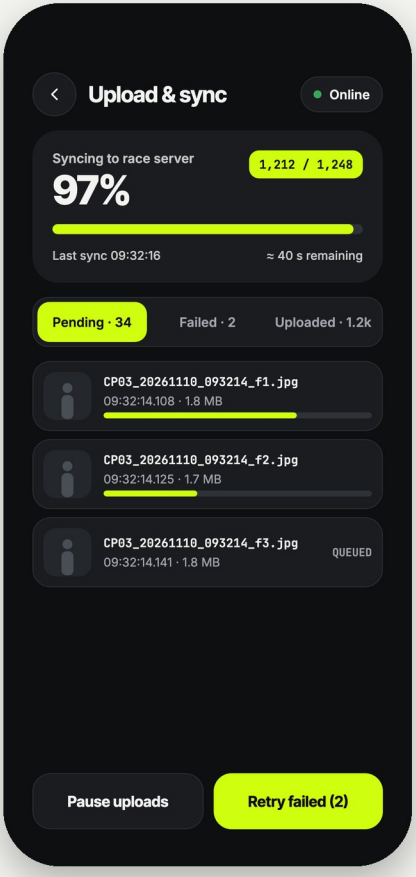

08

Upload & sync

Sync progress, online / offline state and the queue split into Pending, Failed and Uploaded, with pause and retry.

Light

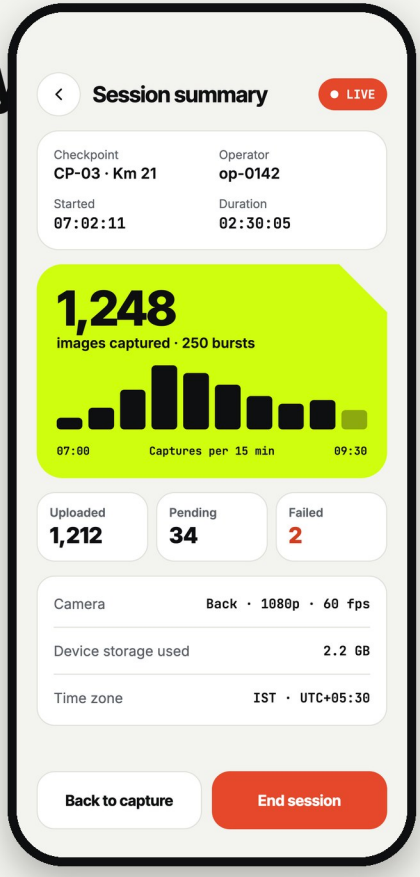

Dark

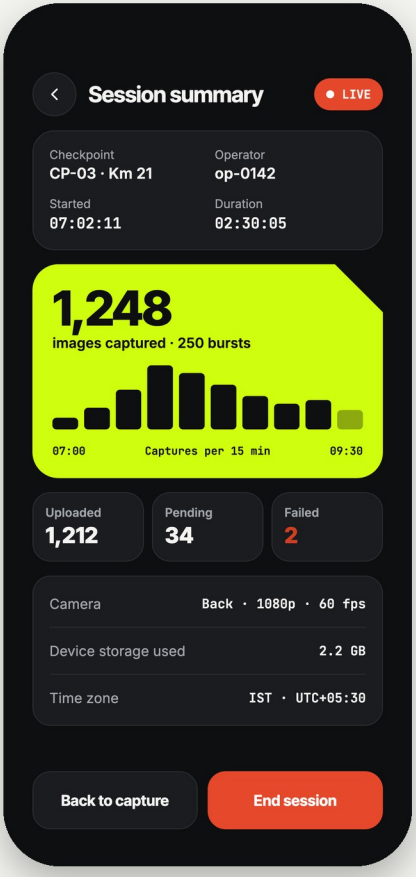

09

Session summary

Session details, total captures with a per-15-minute chart, uploaded / pending / failed counts and End session.

Light

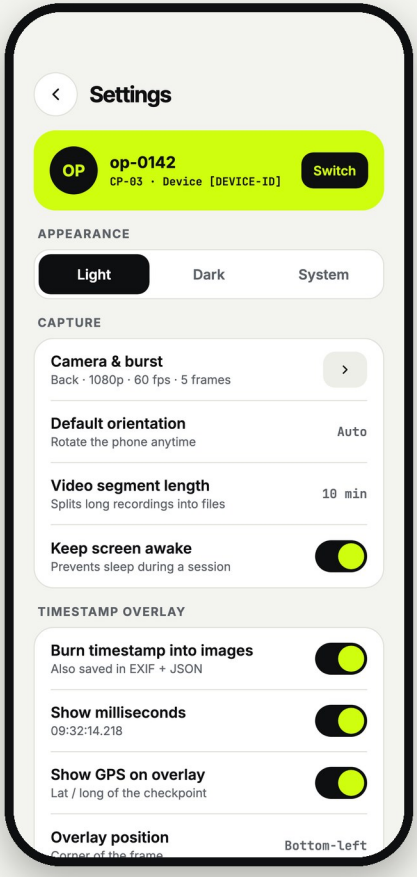

Dark

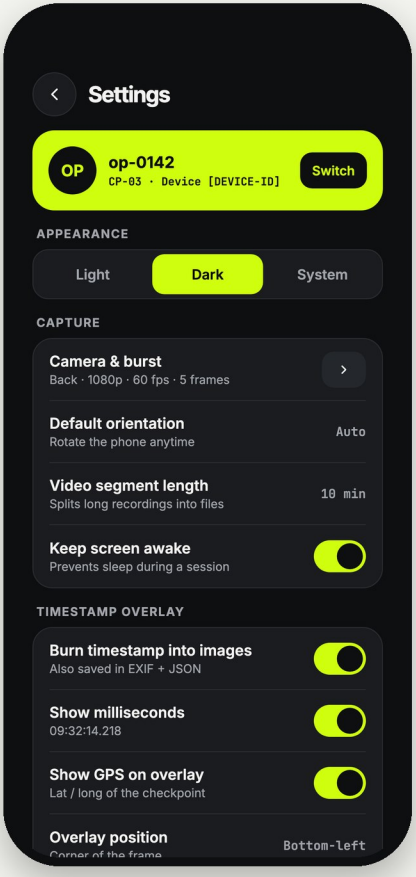

10

Settings

Light / dark / system theme, capture defaults, timestamp overlay options, upload and storage rules, device pages and sign out.

Light

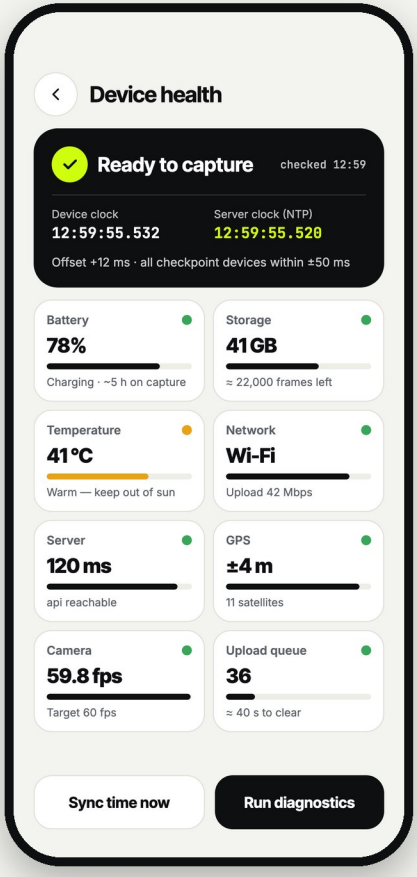

Dark

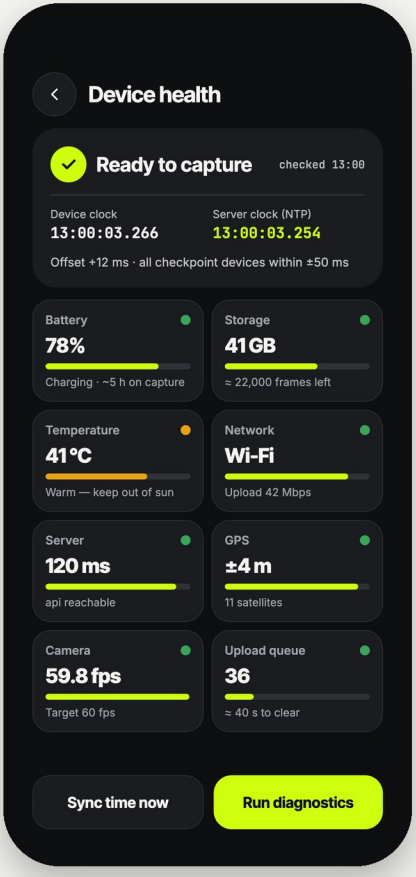

11

Device health

Device clock next to the server clock, plus battery, storage, network, server, GPS, camera FPS and queue — before and during a race.

Light

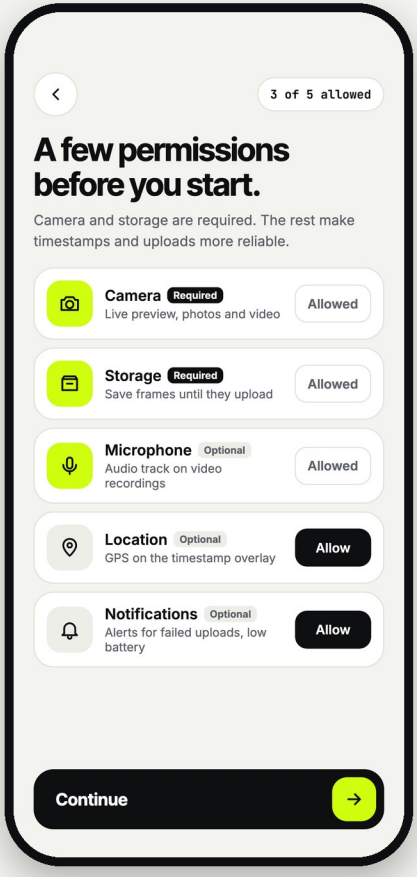

Dark

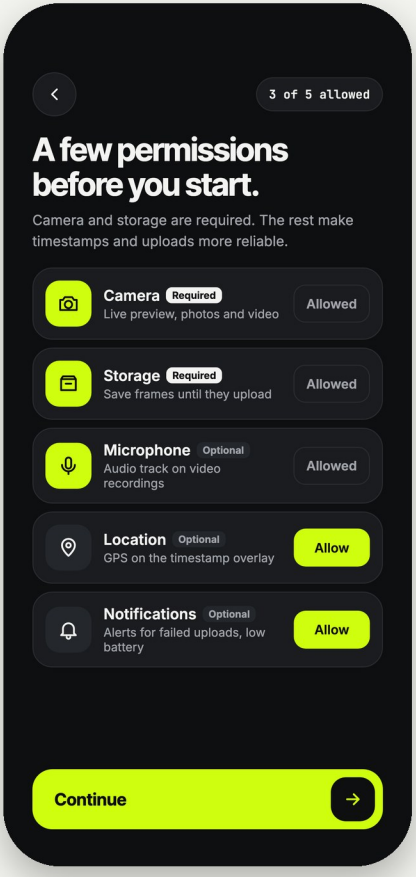

12

Permissions

Camera is required; microphone and location are optional. Each permission explains why it is needed.

Light

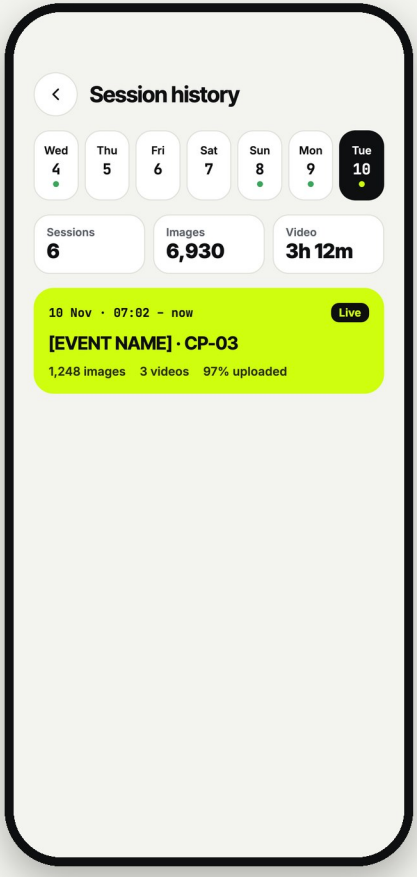

Dark

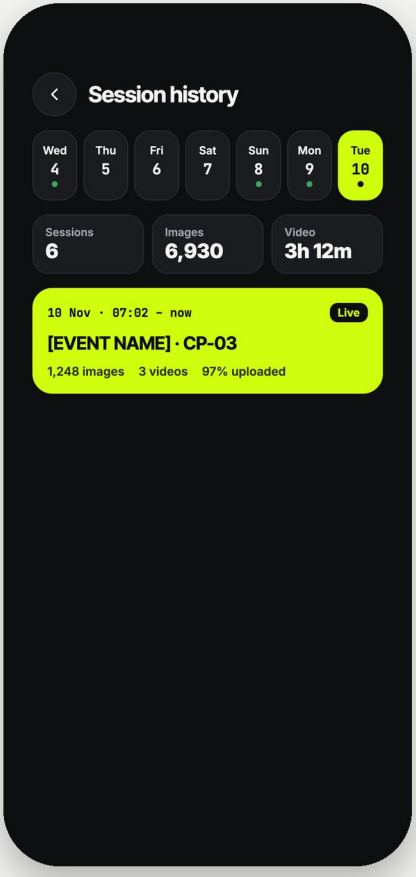

13

Session history

Week picker and past sessions with captures, runners and upload status. Sessions that still need uploading are flagged.

Light

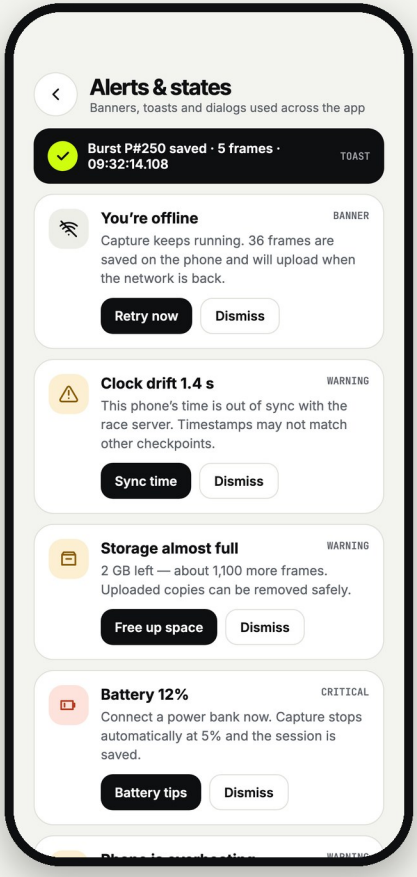

Dark

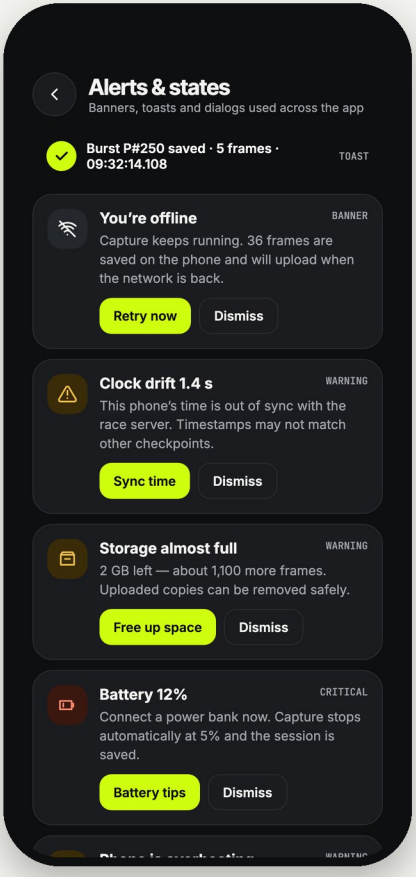

14

Alerts & states

Every warning the app can show — offline, clock drift, storage, battery, heat, camera blocked, failed uploads — plus the toast and the end-session dialog.
